

PRE-HUNG IMPACT and WINDSTORM RATED DOORS

Impact Rated and Coastal Windstorm Approved

Protect your family and your home with GlassCraft's Impact Rated or Windstorm and tested doors. Doors and entryways in this catalog with the logos shown at right below are available to ensure a high level of safety and security against break-ins and weather related impacts. To be approved by building inspectors for use in coastal areas, these units must be ordered from GlassCraft as an assembled Windstorm-Impact Approved entryway.

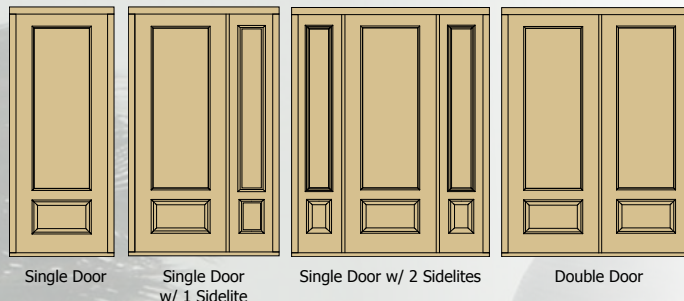

GlassCraft Premium Fiberglass Composite doors and entryways have been evaluated for compliance and are approved for installation in designated catastrophe areas along the Florida and Texas and other coastal areas when installed as required and as specified in the International Residential Code (IRC) and the International Building Code (IBC). Both 6'8" tall and 8'0" tall entryways have been certified in a variety of entryway configurations, including single doors, double doors, and single doors with 1 or 2 sidelites. Certain Solid doors, Speakeasy doors, and doors with glass have been approved with in-swing and out-swing configurations. Proper installation is required to comply with building codes.

Up to 50 DP Rating Available for Select Impact & Windstorm Tested Composite Doors

Visit www.glasscraft.com for complete information on DP Ratings, approval numbers and availability for Impact tested product configurations.

Available Impact Approved Configurations

Impact and Windstorm Features:

- **Doors available.** All impact units are available as Privacy doors, SDL Divided Lite doors, wrought iron grille doors and certain speakeasy doors. Windstorm doors include these same doors plus decorative glass doors. Modern doors and NP-Series narrow profile doors have not been tested and approved for windstorm or impact. We are continuously testing doors, so please check out the website for updated information.
- **Handle set options.** All windstorm / impact units are available for specific Schlage or Kwikset lock sets or specific Rockwell multi-point lock sets. Please note that the Rockwell multipoint handle set must include a lever-action model, not a thumb latch.
- **In-Swing or Out-swing.** Windstorm and impact units are available as both "inswing" and "outswing" units.
- **Laminated glass.** Impact rated units use laminated glass on the exterior side of the glass unit. Windstorm rated units use safety tempered glass.
- **Internal Door reinforcement.** We construct Impact-Rated doors with additional internal reinforcement to withstand potential flying-debris impact.
- **Door height & width options.** We can pre-hang the four entryway configurations shown above using our 3'0" or 2'8" wide and 6'8" or 8'0" tall fiberglass doors and sidelites.
- **Solid Composite Frames.** Offered with Windstorm rated and Impact rated pre-hung units. The composite material used in the door frames and trim is a wood-plastic composite with a wood grain. These "no-rot, no-warp" frames may be stained or painted, and the pre-hung units are available factory finished to match a prefinished fiberglass door.
